

Backups

Security through redundancy!

As ransomware has increased as a threat, it's important to take time to make sure that you have backed up your critical files, especially if you are in a small law office and store important client files. This handout will point you to some options for making backup copies of your data.

If you can, you should encrypt your backups. However, it is better to have unencrypted backups than to not backup anything because you haven't gotten around to setting up an encrypted system.

Windows

Windows 10 built-in backup:
