SECURE MESSAGING

Secure messaging is particularly important for client communications. Luckily, there are many easy-to-use programs available to use for free. Its best to pick a program that you feel comfortable using & which your clients and contacts can use to communicate with you.

Introductions to Secure Communication:

- https://securityinabox.org/en/guide/secure-communication/

There are several different messaging applications you can use. You should pick the one that you're most likely to stick with, which might be based on which one feels intuitive to you, which one your friends and contacts use, or some other determination.

Signal

- https://ssd.eff.org/en/module/how-use-signal-android
- Get it here: https://support.whispersystems.org/hc/en-us

WhatsApp

- Get it here: https://www.whatsapp.com/
  - When you set up WhatsApp, you can configure these options to be most secure. Remember, these might not be the best for your use, you should configure in the way that will be easiest for you to use.
    - Settings > Accounts > Security > Show Security Notifications
    - Settings > Notifications > Disable Show Preview
    - Settings > Chats > Chat Backup: check to see that backups are off
- WhatsApp on iOS
